

CHRISTINA

WANG:

So advice about time management. I think, like, for the first experiment I did-- it was a 21-centimeter astrophysics experiment-- that took a really long time. So I basically spent the entire weekend on the analysis. So, like, after that, I thought I should read about how to do analysis, like, beforehand. I guess try to do everything beforehand because whatever you plan out it will only be like slower than what you plan out. It will never be faster than what you've planned out. So I try to do everything as soon as possible and just don't procrastinate, I guess.
